CLOUDASCENT EXECUTIVE ASSISTANT

Build steps

STEP 1

Prepare the Fabric data

Land sales, churn and partner tables in the lakehouse; query them through the SQL analytics endpoint.

STEP 2

Create the agent

Build it in Copilot Studio (new experience) with instructions for META scope and unique-account counting.

STEP 3

Connect to Fabric

Add the SQL Server connector, point it at the endpoint and authenticate with Microsoft Entra ID.

STEP 4

Teach the three briefings

Write instructions for growth, churn and renewal risk, and partner readiness answers.

STEP 5

Schedule the digest

Create a Copilot Studio workflow that runs daily at 09:00 and sends the digest through Outlook.

STEP 6

Test and publish

Check answers against known figures, then publish to Teams and Microsoft 365 Copilot.
