

Executive Briefing Agent

Setup & Configuration Guide

A Declarative Agent for Microsoft 365 Copilot

Developer: Power CAT | Version 1.0

Last Updated: May 4, 2026

Table of Contents

1. What Is Executive Briefing?
2. Before You Start (Prerequisites)
3. Option A – Install from the Microsoft Marketplace (Agent Library)
4. Option B – Import the Agent into Teams
5. Option C – Build the Agent Yourself
6. Option D – Clone & Deploy with Visual Studio Code
7. Make It Your Own (Customization)
8. Test That It Works

1. What Is Executive Briefing?

The Executive Briefing Agent helps executives and their support teams prepare for leadership meetings, public events, and media interactions by generating structured, brand-aligned briefing documents and post-meeting summaries. The agent consolidates enterprise content from M365 sources into clear talking points, key messages, anticipated questions, and summaries, ensuring executives are always prepared, consistent, and aligned.

What It Pulls Together

Source	What You'll See
 Calendar	Meeting details, transcripts, recordings, and past events with the same attendees
 Email	Correspondence with meeting participants, interviewers, or event organizers
 Teams	Related discussions, mentions, and channel activity from Teams chats
 Files	Documents, decks, prior briefings, and approved messaging from SharePoint and OneDrive
 Web	Industry context, news, interviewer profiles, and public information

Built-in Suggested Prompts

When you open the agent you'll see clickable prompt buttons at the bottom of the chat. Just click one to get started — no typing needed:

Button	What It Does
Executive Meeting	Assist with the next [executive meeting name] with [person]. Focus on [topics to cover].
Post-meeting report	Summarize [executive meeting name] and create a post-meeting report.
Public event	Prepare a speech for my presentation at the [event name and details] on [topic]. The audience are [audience persona].
Leadership Interview	Prepare my interview with [Interviewer name] on the [Interview topic].
Follow-up	Summarize the follow-up points raised in the [previous executive meeting name] with [person].
Key talking points	Create talking points based on my recent emails and chats.

How the Output Is Organized

The agent produces different types of deliverables depending on what you ask for. Each is generated as a Word document:

- **Pre-Meeting Briefing** — A comprehensive document covering executive summary, agenda, background context, talking points, anticipated questions with responses, risks

and considerations, past interactions, and references. Sourced from your calendar, email, Teams, SharePoint, and web.

- **Post-Meeting Report** — A concise summary of meeting outcomes including executive summary, decisions and action items with owners, key themes, and required follow-up steps. Generated from meeting transcripts and related communications.
- **Event Messaging & Speech** — Key messages, talking points, and optionally a full 20-minute speech draft tailored to the event audience. Draws from prior presentations, email correspondence, and web research for industry context.
- **Interview Preparation** — An in-depth preparation package with talking points, anticipated questions and recommended responses, interviewer profile and sentiment, competitor stances, sensitive areas, and media themes. Enriched with web research and internal documents.

2. Before You Start

Make sure the items below are in place. If any are missing, contact your IT administrator.

Checklist

✓	What You Need	Why
☐	Microsoft 365 account	Required to sign in
☐	Microsoft 365 Copilot license	Gives the agent access to your email, calendar, Teams, and files

 **Note:** These are the only universal prerequisites. Each option section below has its own “Before You Begin” checklist with option-specific requirements.

Which Option Should I Choose?

Pick the path that matches how you want to install and roll out this agent.

Option	Best For	You'll Need	Time
Option A – Microsoft Marketplace	Easiest install, ready-to-use experience, no admin needed	Microsoft 365 work account + Power Platform environment + permission to install marketplace apps (System Administrator or System Customizer in target environment)	~10 min
Option B – Import into Teams	Fastest local install, non-technical users	Teams + admin-enabled custom app uploading + the agent .zip	~5 min
Option C – Build in Agent Builder	Full control, no zip needed, no admin permissions required	Agent Builder access via M365 Copilot	~15 min
Option D – Clone & Deploy with VS Code	Developers who want source-code control, ALM, and CI/CD	VS Code + Microsoft 365 Agents Toolkit + access to the source repo	~20 min

3. Option A – Install from the Microsoft Marketplace (Agent Library)

The Agent Library on Microsoft Marketplace offers a curated collection of ready-to-use agent templates you can install directly into your Power Platform environment. Browse by category and deploy in minutes. For more information, visit our documentation on [Microsoft Learn](#).

What's Included in the Library

- **Agent templates for real business scenarios.** Each one follows Microsoft best practices and is ready to customize.
- **Two agent types supported.** Copilot Studio Agents and Declarative Agents - pick the right fit for your use case.
- **Guided configuration.** Customize behavior, knowledge sources, and connected services before you deploy.
- **Version tracking.** Know when updates are available and keep your deployed agents current.

Before You Begin

✓	What You Need	Why
☐	Microsoft 365 work account	Required to sign in to Microsoft Marketplace
☐	A target Power Platform environment	The marketplace app installs into a specific environment
☐	Permission to install marketplace apps in that environment	You need System Administrator or System Customizer security role in target environment
☐	Acceptance of the Marketplace terms of service	Required during the "Get it now" flow

How to Install

1. Go to the [Agent Library](#) on Microsoft Marketplace and **ensure you're signed in** with your Microsoft 365 account.

2. Select **Get it now**.
3. Select **Get it now** to confirm.
4. Select the environment where you will install the solution, review and accept the terms of use and privacy statements, then select **Install**.
5. You'll be redirected to Power Platform Admin Center. If not redirected, to monitor installation progress, navigate to: **Environments** → **your environment** → **Dynamics 365 apps** → **Agent Library**.
6. Once installed, go to **make.powerapps.com** and switch to the environment where you installed the Agent Library.
7. Navigate to **Apps** → **Agent Library**.
8. Browse the available templates and deploy your first agent.

 **Tip:** If you don't see the Agent Library or the Get it now button, ask your tenant admin to [enable Marketplace apps](#) for your environment.

 **Important:** This solution enables code components in your environment. This is a standard Power Platform feature for custom UI experiences and requires no additional licensing beyond your existing entitlements.

Deploy Executive Briefing Agent from the Library

1. Open the Agent Library app from **make.powerapps.com** → **Apps** → **Agent Library**.
2. Browse or search for **Executive Briefing Agent**.
3. Select the template, then click **Configure** (or **Download** if no configuration is required).
4. Configure the template – edit instructions, set knowledge sources, connected services, capabilities and starter prompts.
5. Click **Download** and then follow the side-loading instructions.

Troubleshooting

Problem	Fix
"Get it now" button is greyed out	Sign in with a work or school account that has Marketplace access (personal Microsoft accounts are not supported)
No environments listed in the install dialog	Confirm you have admin permissions on at least one Power Platform environment

Install stuck in "Installing"	Check Power Platform admin center under Resources → Dynamics 365 apps; allow up to 15 minutes
App isn't opening correctly. " This environment does not allow this operation for this Code app."	Have a Power Platform admin enable Code app operations for the target environment
Agent Library app doesn't appear in make.powerapps.com → Apps	Confirm install completed and that you're viewing the same environment
Executive Briefing Agent template not visible in the library	Confirm the agent has been published to the Marketplace catalog

4. Option B – Import the Agent into Teams

This is the fastest way to get started. You'll upload the pre-built agent package directly into Teams.

Before You Begin

✓	What You Need	Why
☐	Microsoft Teams installed	The agent is uploaded through the Teams app
☐	Custom app uploading enabled	Your admin must turn this on — see below
☐	ExecutiveBriefingAgent_v1.0.0.0.zip	The agent package you'll upload

How to Check if Custom App Uploading Is Enabled

Your IT admin controls this setting.

1. Open Teams and click Apps in the left sidebar.
2. Click Manage your apps at the bottom.
3. Look for an Upload an app button.

See the button? ☒ **You're good.** **Don't see it?** Ask your IT admin to enable Upload custom apps in the Teams Admin Center under Teams apps → Setup policies.

 **Important:** Do not unzip or rename the file. Teams needs the original .zip as-is.

Upload the Agent

1. Open Microsoft Teams (desktop app or teams.microsoft.com).
2. Click Apps in the left sidebar.
3. Click Manage your apps (bottom of the page).
4. Click Upload an app → Upload a custom app.
5. Select the ExecutiveBriefingAgent_v1.0.0.0.zip file from your computer.
6. Click Add when the app details appear.

☒ **The agent is now installed!**

Open the Agent After Uploading

Once uploaded, you can access Executive Briefing in two ways:

From Microsoft 365 Copilot (Web)

1. Go to m365.cloud.microsoft/chat in your browser and sign in.
2. Click the side-panel icon next to the New Chat button (top-left area).
3. Browse the agent list and select Executive Briefing.
4. Click a suggested prompt or type your own question to get started.

From Microsoft Teams

1. Open Teams and click the Copilot icon in the left sidebar.
2. Click the side-panel icon to browse available agents.
3. Select Executive Briefing from the list.

Using @Mention (Either App)

In any Copilot chat window, type **@Executive Briefing** followed by your question. Select the agent from the dropdown that appears.

Pin the Agent for Quick Access

Pin Executive Briefing to your sidebar so it's always one click away:

1. Open the agent list by clicking the side-panel icon next to New Chat.
2. Find Executive Briefing in the list.
3. Right-click (or click the ... menu) on the agent and select Pin.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open Executive Briefing, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the prompt buttons displayed at the bottom of the chat. You'll see options like "Executive Meeting", "Post-meeting report", "Public event", and more.
3. Click any button to instantly send that prompt — no typing needed.
4. The agent will respond with a tailored briefing based on the prompt you chose.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What are the key topics I should prepare for my meeting with the CFO tomorrow?" or "Summarize what was discussed in last week's executive leadership sync."

Troubleshooting

Problem	Fix
"Upload an app" button missing	Custom app uploading is disabled. Ask your IT admin to enable it (see Before You Begin above).
"Parsing has failed" error	The zip file may be corrupted. Re-download the original file and try again. Make sure you didn't extract or modify it.
App doesn't appear after upload	Wait 1–2 minutes, then refresh Teams. Check Manage your apps to confirm it's listed.
Agent not showing in Copilot	It can take a few minutes after upload for the agent to appear in the Copilot agent list. Refresh the page and check again.

5. Option C – Build the Agent Yourself

If you can't upload a zip — or prefer to build it yourself — use Agent Builder in Microsoft 365 Copilot. No coding required.

Before You Begin

✓	What You Need	Why
☐	Agent Builder access	Available through Microsoft 365 Copilot at m365.cloud.microsoft/chat

Open Agent Builder

1. Go to m365.cloud.microsoft/chat and sign in.
2. Click New agent in the left pane.
3. Click Skip to configure (top right).

Fill In the Configuration

Name & Description

At the top of the Configure tab, enter the agent's name and description:

Field	What to Enter
Name	Executive Briefing Agent
Description	Executive support agent for meetings, events and interviews.

Instructions

Scroll down to the Instructions box. Copy and paste everything in the box below into that field. This tells the agent how to behave:

```
# Executive Briefing Agent

Interpret instructions literally. Follow step order exactly.

## Purpose
Prepare executive-ready materials for leadership meetings, public events, and media interactions by retrieving, analyzing, and synthesizing enterprise and public information.

## Output Contract
- **Tone:** Professional, concise, factual, insight-driven
- **Format:** Word document (.docx) with headers and bullets
- **Detail:** Max 5 bullets per overview; 1-2 pages per briefing
- **Include:** Facts, sourced insights, actionable recommendations
- **Exclude:** Speculation, filler, disclaimers, unsolicited recommendations
- **Code visibility:** Never display Python code or code-execution steps in chat. Run code silently and present only the final output and deliverable to the user.
```

Workflow

Step 1: Identify Engagement Type

- **Goal:** Determine engagement and deliverable.
- **Action:**
 - Classify the request:
 - **meeting** → Pre-Meeting Briefing or Post-Meeting Report
 - **public event, speech, keynote** → Event Messaging & Speech
 - **press interview, media interaction** → Interview Preparation
 - **general question** → answer in chat (max 3 bullets, no document)
 - If ambiguous, ask: "Is this for a meeting, public event, or press interview?"
- **Transition:** Proceed to Step 2 once confirmed.

Step 2: Gather Context

- **Goal:** Collect type-specific details and get explicit user confirmation before proceeding.
- **Action by type:**
 - **Meeting:**
 - Search **Meetings** for a calendar match.
 - If found, present title, date, and participants for confirmation.
 - If no exact match, present up to four candidates by title, date, participants, or topic.
 - **Event / Speech:**
 - Ask in one message for: event name, date, audience, format, theme, and key objectives.
 - **Interview / Media:**
 - Ask in one message for: interviewee name, interviewer name, publication/outlet, media type (print, TV, podcast...), date, and topic.
 - If details are missing or unclear, ask follow-up questions until all required fields are filled.
- **Confirmation gate:** Present a summary of the gathered context and ask the user to confirm it is correct. **Do not proceed to Step 3 until the user explicitly confirms.**
- **Transition:** Proceed to Step 3 only after user confirmation.

Step 3: Retrieve Content

- **Goal:** Build a reliable information base.
- **Action by type:**
 - **Meeting:**
 - Search **Meetings** for the calendar event, transcript, and recording.
 - Search **Email** (last 6 months) for messages with the same participants and topic.
 - Search **TeamsMessages** for related discussions in chats and channels.
 - Search **OneDriveAndSharePoint** for documents, decks, and prior briefings.
 - Search **Meetings** for past events with the same attendees.
 - **WebSearch**: industry context and news as supplementary grounding.
 - **Event / Speech:**
 - Search **OneDriveAndSharePoint** for prior presentations, decks, and briefings.
 - Search **Email** (last 6 months) for related correspondence.
 - **WebSearch**: industry context, audience background, event coverage.
 - Search **TeamsMessages** for internal discussions on the topic.
 - Search **Meetings** for past events on the same topic.
 - **Interview / Media:**
 - **WebSearch**: interviewer profile, publication history, recent news, competitor stances.
 - Search **Email** for prior correspondence with the interviewer or on the topic.
 - Search **OneDriveAndSharePoint** for media kits, position papers, and approved messaging.
 - Search **TeamsMessages** for internal discussions.
 - Search **Meetings** for past briefings or events on the topic.
- **Transition:** Proceed to Step 4.

```
### Step 4: Analyze & Synthesize
- **Goal:** Produce executive-ready insights.
- **Action:**
  - Extract themes, decisions, risks, context.
  - Summarize concisely.
  - Identify sensitive areas; draft recommended messaging.
  - Draft anticipated questions with responses.
  - **Interview prep** additionally: interviewer profile, sentiment, common questions, competitor stances, uncomfortable areas.
- **Transition:** Proceed to Step 5.

### Step 5: Generate Deliverable
- **Goal:** Produce the briefing using the correct template.
- **Action:**
  - Select template by engagement type (see below). Fill each section.
  - **Speech requests:** 20-min draft, inspirational/visionary tone. Notify user of assumed duration.
  - Present key messages for review before finalizing (event and interview types).
- **Transition:** Proceed to Step 6.

### Step 6: Self-Evaluation
- **Goal:** Validate completeness before delivering.
- **Action:**
  - Confirm every template section is populated.
  - Confirm talking points are sourced from retrieved content.
  - Confirm output follows the Output Contract.
  - Flag gaps: "⚠ Incomplete - [specific gap]."
- **Transition:** Deliver.

---

## Output Templates

### Pre-Meeting Briefing
| Section | Description |
|-----|-----|
| Executive Summary | Overview of meeting purpose and key takeaways |
| Agenda | Extracted or generated agenda items |
| Background Context | History, decisions, stakeholder positions |
| Talking Points | Points to raise, sourced from **Email**, **Teams**, **SharePoint** |
| Anticipated Questions & Responses | Likely questions with prepared answers |
| Risks & Considerations | Sensitive topics, unresolved issues, political dynamics |
| Past Interactions | Prior meetings or exchanges on the topic |
| References | Links to internal content used |

### Post-Meeting Report
| Section | Description |
|-----|-----|
| Executive Summary | One-paragraph overview of outcomes |
| Agenda | Agenda as discussed |
| Decisions, Actions & Commitments | Specific decisions made, action items with owners and dates |
| Key Themes & Follow-Up | Recurring themes and required next steps |

### Interview Preparation Report
| Section | Description |
|-----|-----|
| Background Context | Topic overview and company positioning |
| Key Talking Points | Positive company messaging aligned to the topic |
| Anticipated Questions & Recommended Responses | Likely questions with draft answers |
| Current Media Themes | Relevant trends in public discourse |
```

```

| Competitor Stances | How competitors are positioned on the topic |
| Sensitive Areas & Risks | Uncomfortable topics and recommended handling |
| Interviewer Profile | Background, professional history, public positions |
| Interviewer Sentiment | Documented stance toward the topic and company |
| Common Interviewer Patterns | Recurring question types and interview style |
| Past Interactions | Prior interviews or exchanges with this interviewer |

---

## Output Delivery Format
For Pre-Meeting Briefings, Post-Meeting Reports, Interview Preparation, and Speeches:
- Generate the deliverable as a Word document (.docx) using python-docx or equivalent. Do not generate a Markdown file.
- Deliver a concise summary in chat (key highlights only, not the full document).
- End the message with a link to the generated .docx file: [📄 filename.docx 📄](URL)
- Do not display any Python code, scripts, or code-execution output in chat. Run all code silently.

For general questions: answer in chat only. No file.

### Markdown-Safe Titles
Strip characters that break markdown (`[`, `]`, `(`, `)`, `<`, `>`, `#`) from titles in links/headings.
- Example: "Meeting [important]" → "Meeting important"

---

## Error Handling
- If a step fails, continue with the next step and provide the best output with available information.
- Flag gaps: "⚠ Incomplete - [reason]."
```

 **Tip:** Select all the text in the box above (Ctrl+A after clicking inside) and paste it directly into the Instructions field.

Knowledge Sources

Scroll down to the Knowledge section. You'll see a row of icons and a search bar that says "Enter a URL or name or drop files here". Add four knowledge sources by clicking the icons one at a time:

Add SharePoint Files

1. Click the SharePoint icon (the first icon — it looks like a teal/blue document icon).
2. A dropdown will appear. Select "My SharePoint files, folders, and sites".
3. This gives the agent access to your OneDrive and SharePoint content.

Add Teams Chats & Meetings

4. Click the Teams icon (the second icon — it looks like a purple people/chat icon).
5. A dropdown will appear. Select "My Teams chats and meetings".
6. This gives the agent access to your Teams conversations and meeting transcripts.

Add Emails

7. Click the Outlook icon (the third icon — it looks like a blue envelope icon).
8. A dropdown will appear. Select "My emails".
9. This gives the agent access to your Outlook inbox and sent items.

Enable Web Search

10. Toggle on "Search all websites" to allow the agent to search the web for supplementary context such as industry news and public information.

After adding all sources, you should see them listed as active knowledge sources under the search bar with toggle switches turned on.

Enable Code Interpreter

This agent uses Code Interpreter to generate Word documents as output. In Agent Builder, scroll to the agent settings and make sure the Code Interpreter toggle is turned on. This is typically enabled by default.

 **Note:** The availability of these knowledge sources depends on your license. Users with a Microsoft 365 Copilot license get full access to all sources.

Starter Prompts

Scroll down to the Starter Prompts section. Add these prompts so users see clickable quick-start buttons when they open the agent:

Title	Prompt
Executive Meeting	Assist with the next [executive meeting name] with [person]. Focus on [topics to cover].
Post-meeting report	Summarize [executive meeting name] and create a post-meeting report.
Public event	Prepare a speech for my presentation at the [event name and details] on [topic]. The audience are [audience persona].
Leadership Interview	Prepare my interview with [Interviewer name] on the [Interview topic].
Follow-up	Summarize the follow-up points raised in the [previous executive meeting name] with [person].
Key talking points	Create talking points based on my recent emails and chats.

Test & Create

1. Click the Try it tab (top of the page, next to Configure) and test a few prompts to make sure the agent works.
2. When you're happy with it, click Create (top right).
3. Click Go to agent to start using it.

How to Access Your New Agent

After creating the agent, you can open it anytime:

Method	How
Copilot Web	Go to m365.cloud.microsoft/chat → click the side-panel icon next to New Chat → select Executive Briefing
Teams	Open Teams → click Copilot in the sidebar → click the side-panel icon → select Executive Briefing
@Mention	In any Copilot chat, type @Executive Briefing followed by your question

Pin the Agent for Quick Access

Pin Executive Briefing to your sidebar so it's always one click away:

1. Open the agent list by clicking the side-panel icon next to New Chat.
2. Find Executive Briefing in the list.
3. Right-click (or click the ... menu) on the agent and select Pin.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open Executive Briefing, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the prompt buttons displayed at the bottom of the chat. You'll see options like "Executive Meeting", "Post-meeting report", "Public event", and more.
3. Click any button to instantly send that prompt — no typing needed.
4. The agent will respond with a tailored briefing based on the prompt you chose.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What are the key topics I should prepare for my meeting with the CFO tomorrow?" or "Summarize what was discussed in last week's executive leadership sync."

6. Option D – Clone & Deploy with Visual Studio Code

This option is for developers who want full control over the agent source code. You'll clone the agent repository, customize it locally, and deploy it using the Microsoft 365 Agents Toolkit in VS Code.

Before You Begin

✓	What You Need	Why
☐	Visual Studio Code installed	Your code editor for this workflow
☐	Git installed	Required to clone the agent repository
☐	Microsoft 365 Agents Toolkit extension	VS Code extension for building and deploying M365 agents
☐	Node.js (v18 or later)	Required by the toolkit and agent runtime

Key Terms

Term	What It Means
Clone	Download a copy of the agent source code to your computer
Repository (Repo)	The online location where the agent's code is stored
Deploy	Upload and activate the agent so it's available in M365 Copilot
Sideload	Install a custom app for testing before publishing broadly
Manifest	A configuration file that describes the agent's identity and capabilities

Install the M365 Agents Toolkit

1. Open Visual Studio Code.
2. Click the Extensions icon in the left sidebar (or press Ctrl+Shift+X).
3. Search for "Microsoft 365 Agents Toolkit" in the search bar.
4. Click Install on the Microsoft 365 Agents Toolkit extension.

|  **Tip:** After installation, you'll see the Agents Toolkit icon in the VS Code sidebar.

Clone the Agent Repository

1. Open a terminal in VS Code (Terminal → New Terminal).
2. Run: git clone [repository-url] (replace [repository-url] with the URL provided by your team lead or admin).

3. Open the cloned folder in VS Code (File → Open Folder).

 **Note:** Ask your team lead or admin for the repository URL if you don't have it.

Provision and Deploy

1. Click the Agents Toolkit icon in the VS Code sidebar.
2. Sign in to your Microsoft 365 account when prompted.
3. Click "Provision" in the Lifecycle section to set up cloud resources.
4. Click "Deploy" to upload the agent to your M365 environment.
5. Wait for the success notification in VS Code.

 **The agent is now deployed to your M365 environment!**

Preview and Test

1. In the Agents Toolkit sidebar, click "Preview in Copilot".
2. The agent will open in Microsoft 365 Copilot in your browser.
3. Try one of the suggested prompts to verify everything works.

Troubleshooting

Problem	Fix
Toolkit not showing in sidebar	Restart VS Code after installing the extension
Sign-in fails	Ensure you're using your M365 account (not a personal Microsoft account)
Provision fails	Check that your Microsoft 365 Copilot license is active
Deploy fails	Verify Node.js v18+ is installed (run <code>node --version</code> in terminal)
Agent not appearing in Copilot	Wait 1–2 minutes after deploy, then refresh the Copilot page

7. Make It Your Own

You can adjust the agent's behavior after setup.

If You Built It in Agent Builder

- 1. In Copilot, find Executive Briefing in your agents list.
- 2. Click the ... menu → Edit.
- 3. Make changes on the Configure tab and they save automatically.

If You Imported the Zip

- 1. Extract the zip file.
- 2. Open declarativeAgent.json in any text editor (e.g., Notepad).
- 3. Make your changes, save, and re-zip all files.
- 4. In Teams, remove the old version (Manage your apps → Remove) and upload the new zip.

 **Important:** When re-zipping, make sure the files are at the root of the zip — not inside a subfolder.

If You Used Option D (VS Code)

- 1. Open the project folder in VS Code.
- 2. Edit the declarativeAgent.json file or the instructions directly.
- 3. Re-deploy using the Agents Toolkit ("Deploy" button in the Lifecycle section).

 **Tip:** Changes deployed via the toolkit take effect within 1–2 minutes. Refresh your Copilot chat to see updates.

What You Can Change

Customization	How
Change the agent's tone	Edit the Instructions — adjust wording like "Professional, concise, factual" to match your style
Hide output sections	Remove sections (e.g., Interviewer Sentiment) from the Instructions text
Add a VIP list	Add names to the Instructions so the agent always prioritizes their communications
Turn data sources on/off	Add or remove knowledge sources in Agent Builder, or edit the capabilities list in the JSON
Edit starter prompts	Update the Starter Prompts in Agent Builder, or edit conversation_starters in the JSON

Customization	How
Swap the icon	Replace color.png (192×192) and outline.png (32×32) in the zip with your own PNGs

8. Test That It Works

Run through these quick checks after setup to make sure everything is connected.

Quick Smoke Test

#	Try This Prompt	What to Look For
1	Assist with the next leadership meeting with [colleague]. Focus on [topic].	A structured pre-meeting briefing with talking points, anticipated questions, and background context from email, Teams, and SharePoint.
2	Summarize [meeting name] and create a post-meeting report.	A post-meeting report with executive summary, decisions, action items, and follow-up themes from meeting transcripts.
3	Prepare a speech for my presentation at [event] on [topic].	A speech draft or event messaging document with key messages and audience-tailored talking points.
4	Prepare my interview with [interviewer] on [topic].	An interview preparation report with anticipated questions, responses, interviewer profile, and media themes.
5	Create talking points based on my recent emails and chats.	A concise set of talking points synthesized from recent email threads and Teams conversations.

 **Note:** If the agent doesn't return data for a specific source (e.g., no Teams messages), that's OK — it only shows sections where data exists. Replace placeholder text in brackets (like [colleague] or [topic]) with real names and topics from your work.

Full Evaluation

For a deeper test, a dedicated evaluation test plan is available alongside the agent package:

File	What It Is
Exec Briefing Agent - Evaluation Test Plan.pdf	Detailed test plan with pass/fail criteria for validating the agent's behavior across grounding accuracy, citation behavior, clarification prompts, tone, and more
