

My Company Policy Agent

Setup & Configuration Guide

A Declarative Agent for Microsoft 365 Copilot

Developer: Power CAT | Version 1.0

Last Updated: May 4, 2026

Table of Contents

1. What Is Plan My Day?
2. Before You Start (Prerequisites)
3. Option A – Install from the Microsoft Marketplace (Agent Library)
4. Option B – Import the Agent into Teams
5. Option C – Build the Agent Yourself
6. Option D – Clone & Deploy with Visual Studio Code
7. Make It Your Own (Customization)
8. Test That It Works

1. What Is My Company Policy?

Ask me anything about company policies. I can answer questions about employment, compensation, benefits, leave, onboarding, and more.

What It Pulls Together

Source	What You'll See
 Files	Company policy documents stored in SharePoint — employment, compensation, benefits, leave, onboarding, and more

Built-in Suggested Prompts

When you open the agent you'll see clickable prompt buttons at the bottom of the chat. Just click one to get started — no typing needed:

Button	What It Does
 Summarize Leave	Summarize all types of leave you're eligible for as a full-time employee
 New Hire	Learn what happens during your first 90 days and the probationary period policy
 Health Insurance	Explore health insurance options available to employees
 Parental Leave	Find out how much notice is required before taking parental leave
 Paid Holidays	See the company's paid holidays this year
 Board Meeting	Review key discussion points from the last board meeting

How Responses Are Structured

- **Grounded Answers** — Responses are sourced exclusively from your company's SharePoint policy documents, with inline citations referencing the document name, policy number, and section.
- **Context-Aware** — The agent factors in your location and job title to surface the most relevant policy version for your situation.
- **Clarifying Questions** — When a question is ambiguous or depends on your employment details (e.g., full-time vs. part-time, tenure, role), the agent asks a targeted follow-up before answering.
- **Disclaimer** — Every response ends with a reminder that the content is AI-generated and that critical decisions should be verified with HR.

2. Before You Start

Make sure the items below are in place. If any are missing, contact your IT administrator.

Checklist

✓	What You Need	Why
☐	Microsoft 365 account	Required to sign in
☐	Microsoft 365 Copilot license	Gives the agent access to your email, calendar, Teams, and files

 **Note:** These are the only universal prerequisites. Each option section below has its own “Before You Begin” checklist with option-specific requirements.

SharePoint Site with Policy Documents

This agent pulls its answers from company policy documents stored in a SharePoint site. Before you begin setup, make sure you know the URL of the SharePoint site (or document library) that contains your company's policy documents.

Example URL: <https://yourcompany.sharepoint.com/sites/CompanyPolicy/Shared Documents>

 **Tip:** You can find the URL by navigating to the SharePoint site in your browser and copying the URL from the address bar. If you're unsure which site to use, ask your HR department or SharePoint administrator.

 **Important:** The agent package ships with a placeholder URL that must be replaced with your actual SharePoint site. Each setup option below includes the specific steps to do this.

Which Option Should I Choose?

Pick the path that matches how you want to install and roll out this agent.

Option	Best For	You'll Need	Time
Option A – Microsoft Marketplace	Easiest install, ready-to-use experience, no admin needed	Microsoft 365 work account + Power Platform environment + permission to install marketplace apps (System Administrator or System Customizer in target environment)	~10 min
Option B – Import into Teams	Fastest local install, non-technical users	Teams + admin-enabled custom app uploading + the agent .zip	~5 min
Option C – Build in Agent Builder	Full control, no zip needed, no admin permissions required	Agent Builder access via M365 Copilot	~15 min
Option D – Clone & Deploy with VS Code	Developers who want source-code control, ALM, and CI/CD	VS Code + Microsoft 365 Agents Toolkit + access to the source repo	~20 min

3. Option A – Install from the Microsoft Marketplace (Agent Library)

The Agent Library on Microsoft Marketplace offers a curated collection of ready-to-use agent templates you can install directly into your Power Platform environment. Browse by category and deploy in minutes. For more information, visit our documentation on [Microsoft Learn](#).

What's Included in the Library

- **Agent templates for real business scenarios.** Each one follows Microsoft best practices and is ready to customize.
- **Two agent types supported.** Copilot Studio Agents and Declarative Agents - pick the right fit for your use case.
- **Guided configuration.** Customize behavior, knowledge sources, and connected services before you deploy.
- **Version tracking.** Know when updates are available and keep your deployed agents current.

Before You Begin

✓	What You Need	Why
☐	Microsoft 365 work account	Required to sign in to Microsoft Marketplace
☐	A target Power Platform environment	The marketplace app installs into a specific environment
☐	Permission to install marketplace apps in that environment	You need System Administrator or System Customizer security role in target environment
☐	Acceptance of the Marketplace terms of service	Required during the "Get it now" flow

How to Install

1. Go to the [Agent Library](#) on Microsoft Marketplace and **ensure you're signed in** with your Microsoft 365 account.

2. Select **Get it now**.
3. Select **Get it now** to confirm.
4. Select the environment where you will install the solution, review and accept the terms of use and privacy statements, then select **Install**.
5. You'll be redirected to Power Platform Admin Center. If not redirected, to monitor installation progress, navigate to: **Environments** → **your environment** → **Dynamics 365 apps** → **Agent Library**.
6. Once installed, go to **make.powerapps.com** and switch to the environment where you installed the Agent Library.
7. Navigate to **Apps** → **Agent Library**.
8. Browse the available templates and deploy your first agent.

 **Tip:** If you don't see the Agent Library or the Get it now button, ask your tenant admin to [enable Marketplace apps](#) for your environment.

 **Important:** This solution enables code components in your environment. This is a standard Power Platform feature for custom UI experiences and requires no additional licensing beyond your existing entitlements.

Deploy My Company Policy from the Library

1. Open the Agent Library app from **make.powerapps.com** → **Apps** → **Agent Library**.
2. Browse or search for **My Company Policy**.
3. Select the template, then click **Configure** (or **Download** if no configuration is required).
4. Configure the template – edit instructions, set knowledge sources, connected services, capabilities and starter prompts.
5. Click **Download** and then follow the side-loading instructions.

Troubleshooting

Problem	Fix
"Get it now" button is greyed out	Sign in with a work or school account that has Marketplace access (personal Microsoft accounts are not supported)
No environments listed in the install dialog	Confirm you have admin permissions on at least one Power Platform environment

Install stuck in "Installing"	Check Power Platform admin center under Resources → Dynamics 365 apps; allow up to 15 minutes
App isn't opening correctly. " This environment does not allow this operation for this Code app."	Have a Power Platform admin enable Code app operations for the target environment
Agent Library app doesn't appear in make.powerapps.com → Apps	Confirm install completed and that you're viewing the same environment
My Company Policy template not visible in the library	Confirm the agent has been published to the Marketplace catalog

4. Option B – Import the Agent into Teams

This is the fastest way to get started. You'll configure the agent package with your SharePoint site, then upload it directly into Teams.

Before You Begin

✓	What You Need	Why
☐	Microsoft Teams installed	The agent is uploaded through the Teams app
☐	Custom app uploading enabled	Your admin must turn this on — see below
☐	My Company Policy.zip file	The agent package you'll upload
☐	Your SharePoint site URL	The URL of the SharePoint site containing your company policy documents

How to Check if Custom App Uploading Is Enabled

Your IT admin controls this setting.

1. Open Teams and click Apps in the left sidebar.
2. Click Manage your apps at the bottom.
3. Look for an Upload an app button.

See the button? ☒ **You're good.** **Don't see it?** Ask your IT admin to enable Upload custom apps in the Teams Admin Center under Teams apps → Setup policies.

Configure Your SharePoint Knowledge Source

The agent package ships with a placeholder SharePoint URL. Before uploading, you must replace it with the URL of the SharePoint site that contains your company policy documents.

1. Extract (unzip) the My Company Policy.zip file to a folder on your computer.
2. Open the file named `declarativeAgent.json` in a text editor (e.g., Notepad, VS Code, or Notepad++).
3. Find the capabilities section near the bottom of the file. It looks like this:

```
"capabilities": [
  {
    "name": "OneDriveAndSharePoint",
    "items_by_url": [
      {
        "url":
"https://replaceme.with.your.sharepoint.com/sites/CompanyPolicy/Shared%20Documents"
      }
    ]
  }
]
```

```
}
]
```

4. Replace the placeholder URL

`https://replaceme.with.your.sharepoint.com/sites/CompanyPolicy/Shared%20Documents` with the actual URL of your SharePoint site. For example:

```
"capabilities": [
  {
    "name": "OneDriveAndSharePoint",
    "items_by_url": [
      {
        "url":
"https://yourcompany.sharepoint.com/sites/YourSite/Shared%20Documents"
      }
    ]
  }
]
```

5. Save the file.

6. Re-zip all the files (`declarativeAgent.json`, `manifest.json`, `companyinfo.png`, `outline.png`) back into a single `.zip` file.

 **Important:** When re-zipping, make sure the files are at the root of the zip — not inside a subfolder. Do not add extra files or rename any files.

 **Tip:** If your SharePoint URL contains spaces, replace them with `%20` in the JSON. For example: Shared Documents becomes `Shared%20Documents`.

Upload the Agent

1. Open Microsoft Teams (desktop app or `teams.microsoft.com`).
2. Click Apps in the left sidebar.
3. Click Manage your apps (bottom of the page).
4. Click Upload an app → Upload a custom app.
5. Select the updated `.zip` file you just re-zipped.
6. Click Add when the app details appear.

 The agent is now installed and connected to your SharePoint policy documents!

Open the Agent After Uploading

Once uploaded, you can access My Company Policy in two ways:

From Microsoft 365 Copilot (Web)

1. Go to `m365.cloud.microsoft/chat` in your browser and sign in.
2. Click the side-panel icon next to the New Chat button (top-left area).

3. Browse the agent list and select My Company Policy.
4. Click a suggested prompt button or type your own question.

From Microsoft Teams

1. Open Teams and click the Copilot icon in the left sidebar.
2. Click the side-panel icon to browse available agents.
3. Select My Company Policy from the list.

Using @Mention (Either App)

In any Copilot chat window, type **@My Company Policy** followed by your question. Select the agent from the dropdown that appears.

Pin the Agent for Quick Access

Pin My Company Policy to your sidebar so it's always one click away:

1. Open the agent list by clicking the side-panel icon next to New Chat.
2. Find My Company Policy in the list.
3. Right-click (or click the ... menu) on the agent and select Pin.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open My Company Policy, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the prompt buttons displayed at the bottom of the chat. You'll see options like "Summarize Leave", "New Hire", "Health Insurance", and more.
3. Click any button to instantly send that prompt — no typing needed.
4. The agent will respond with a policy answer grounded in your company documents.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What is the company dress code policy?" or "How do I request a leave of absence?"

Troubleshooting

Problem	Fix
"Upload an app" button missing	Custom app uploading is disabled. Ask your IT admin to enable it (see Section 2).
"Parsing has failed" error	The zip file may be corrupted or the JSON is malformed. Re-open declarativeAgent.json, verify the URL edit didn't break the

Problem	Fix
	JSON syntax (check for missing quotes or commas), then re-zip and try again.
App doesn't appear after upload	Wait 1–2 minutes, then refresh Teams. Check Manage your apps to confirm it's listed.
Agent not showing in Copilot	It can take a few minutes after upload for the agent to appear in the Copilot agent list. Refresh the page and check again.
Agent returns no results	The SharePoint URL may be incorrect. Verify that the URL in declarativeAgent.json points to the correct SharePoint document library and that the policy documents are stored there.

5. Option C – Build the Agent Yourself

If you can't upload a zip — or prefer to build it yourself — use Agent Builder in Microsoft 365 Copilot. No coding required.

Before You Begin

✓	What You Need	Why
☐	Agent Builder access	Available through Microsoft 365 Copilot at m365.cloud.microsoft/chat
☐	Your SharePoint site URL	The URL of the SharePoint site containing your company policy documents

Open Agent Builder

1. Go to m365.cloud.microsoft/chat and sign in.
2. Click New agent in the left pane.
3. Click Skip to configure (top right).

Fill In the Configuration

Name & Description

At the top of the Configure tab, enter the agent's name and description:

Field	What to Enter
Name	My Company Policy
Description	Ask me anything about company policies.

Instructions

Scroll down to the Instructions box. Copy and paste everything in the box below into that field. This tells the agent how to behave:

You are the My Company Policy Assistant, an internal HR and company policy resource for employees. The purpose of this assistant is to help employees understand company policies accurately, clearly, and with appropriate citations to the source documents.

Tone and Style

- Respond as "My Company Policy Agent", not as a human or individual. Do not use first-person pronouns (I, me, my, we, our). Instead, refer to the assistant as "My Company Policy Agent" where a subject is needed. Example: "My Company Policy Agent was unable to find a policy covering this topic" rather than "I couldn't find anything."
- Professional, approachable, and concise
- Neutral and non-judgmental on sensitive HR topics
- Never condescending – assume employees are asking in good faith
- Use plain language; avoid HR or legal jargon unless it is defined in the policy itself

Knowledge Sources

You have access to official company policy documents stored in SharePoint.

Answers must be grounded exclusively in these documents. Do not use general knowledge, training data, or assumptions to answer policy questions. If the answer is not found in the available documents, say so – do not supplement with information from outside the provided sources.

User Context

M365 Copilot has access to the user's organizational profile, including their location and job title. When searching for relevant policy content, always factor in:

- The user's geographic location or region – prioritize policies applicable to their jurisdiction or office location
- The user's job title or role – surface policies relevant to their employment classification or level

If a retrieved policy varies by region or role and the user's profile indicates a specific location or title, lead with the version that applies to them and note that other variations exist.

Core Behaviors

Always cite your sources

Every answer must reference the specific document name, policy number, and section where the information was found. Format citations inline, for example: "Full-time employees accrue 15 days of PTO in their first two years of service. (Company Leave Policy, HR-POL-006, Section 2)" If an answer draws from more than one document, cite each one where relevant.

Clarify before answering when intent is ambiguous

If a question could be interpreted in more than one way, or if the answer depends on details not available (such as employment classification, tenure, or location), ask a targeted follow-up question before answering. Do not make assumptions about the employee's situation.

Examples of when to ask a follow-up question:

- "How much PTO do I get?" – Ask whether they are full-time or part-time, and how long they have been with the company.
- "What is my bonus?" – Ask what job level they are, as bonus target percentages vary by level.
- "Am I eligible for parental leave?" – Ask whether they are the primary or secondary caregiver and how long they have been employed.

Keep follow-up questions brief – ask only what is necessary to give an accurate answer. Ask one question at a time; identify the single most important clarifying detail and ask it first.

Be direct and structured

Lead with the answer, then provide supporting detail. Use bullet points or short paragraphs for readability. Avoid unnecessary preamble.

Acknowledge when something is not covered

If a question cannot be answered from the available policy documents, say so clearly. Suggest the employee contact HR directly at hr@meridiansolutions.com, or their manager for role-specific situations.

Do not provide legal or personal advice

My Company Policy Agent can explain what a policy says, but must not interpret how a policy applies to a specific legal, medical, or disciplinary situation. For those cases, direct the employee to HR or Legal.

Treat all topics with appropriate sensitivity

Questions about compensation, disciplinary matters, leave for medical or family reasons, or employment eligibility should be answered factually and without judgment. Do not volunteer information beyond what was asked.

Keep answers current to the documents provided

If a policy document references a specific year, dollar amount, or legal threshold, relay it accurately and note that limits may be subject to annual IRS or regulatory adjustment where applicable.

Out-of-Scope Requests

If an employee asks something unrelated to company policy (e.g., IT support, project questions, personal career advice), let them know this assistant is focused on company policies and direct them to the appropriate resource.

Disclaimer

Every response must end with the following disclaimer:

This response was generated by an AI assistant and may not reflect the most recent policy updates. Always verify critical decisions with HR.

 **Tip:** Select all the text in the box above (Ctrl+A after clicking inside) and paste it directly into the Instructions field.

Knowledge Sources

Scroll down to the Knowledge section. This is where you connect the agent to the SharePoint site that contains your company policy documents. The agent needs this to ground its answers in your actual policies.

Add Your SharePoint Policy Site

1. Click the SharePoint icon in the Knowledge section (the first icon — it looks like a teal/blue document icon).
2. A search panel will appear with filter tabs (All, Files, Sites, Chats, Meetings).
3. Click the Sites tab to narrow the results to SharePoint sites.
4. In the search bar, type the name of your SharePoint site (e.g., **Company Policy**) or paste the full URL:

<https://yourcompany.sharepoint.com/sites/CompanyPolicy/Shared Documents>

5. Select the matching SharePoint site from the search results.
6. Confirm it appears as an active knowledge source below the search bar with the toggle switch turned on.

After adding the source, you should see it listed under the Knowledge section. The agent will now use this SharePoint site to answer policy questions.

Note: If you don't see your SharePoint site in the search results, verify that you have access to the site in your browser first. You may need to ask your SharePoint administrator to grant you access.

Tip: You can add multiple SharePoint sites if your policy documents are spread across different locations. Just repeat the steps above for each site.

Starter Prompts

Scroll down to the Starter Prompts section. Add these prompts so users see clickable quick-start buttons when they open the agent:

Title	Prompt
Summarize Leave	Can you summarize all the types of leave I'm eligible for as a full-time employee?
New Hire	What happens during my first 90 days, and what is the probationary period policy?
Health Insurance	What health insurance options are available to employees?
Parental Leave	How much notice do I need to give before taking parental leave?
Paid Holidays	What are the company's paid holidays this year?
Board Meeting	What were the key discussion points from the last board meeting?

Test & Create

1. Click the Try it tab (top of the page, next to Configure) and test a few prompts to make sure the agent retrieves answers from your SharePoint documents.
2. When you're happy with it, click Create (top right).
3. Click Go to agent to start using it.

How to Access Your New Agent

After creating the agent, you can open it anytime:

Method	How
Copilot Web	Go to m365.cloud.microsoft/chat → click the side-panel icon next to New Chat → select My Company Policy
Teams	Open Teams → click Copilot in the sidebar → click the side-panel icon → select My Company Policy
@Mention	In any Copilot chat, type @My Company Policy followed by your question

Pin the Agent for Quick Access

Pin My Company Policy to your sidebar so it's always one click away:

1. Open the agent list by clicking the side-panel icon next to New Chat.
2. Find My Company Policy in the list.

3. Right-click (or click the ⋮ menu) on the agent and select Pin.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open My Company Policy, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the prompt buttons displayed at the bottom of the chat. You'll see options like "Summarize Leave", "New Hire", "Health Insurance", and more.
3. Click any button to instantly send that prompt — no typing needed.
4. The agent will respond with a policy answer grounded in your company documents.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What is the company dress code policy?" or "How do I request a leave of absence?"

6. Option D – Clone & Deploy with Visual Studio Code

This option is for developers who want full control over the agent source code. You'll clone the agent repository, configure it with your SharePoint site, and deploy it using the Microsoft 365 Agents Toolkit in VS Code.

Before You Begin

✓	What You Need	Why
☐	Visual Studio Code installed	Your code editor for this workflow
☐	Git installed	Required to clone the agent repository
☐	Microsoft 365 Agents Toolkit extension	VS Code extension for building and deploying M365 agents
☐	Node.js (v18 or later)	Required by the toolkit and agent runtime
☐	Your SharePoint site URL	The URL of the SharePoint site containing your company policy documents

Key Terms

Term	What It Means
Clone	Download a copy of the agent source code to your computer
Repository (Repo)	The online location where the agent's code is stored
Deploy	Upload and activate the agent so it's available in M365 Copilot
Sideload	Install a custom app for testing before publishing broadly
Manifest	A configuration file that describes the agent's identity and capabilities

Install the M365 Agents Toolkit

1. Open Visual Studio Code.
2. Click the Extensions icon in the left sidebar (or press Ctrl+Shift+X).
3. Search for "Microsoft 365 Agents Toolkit" in the search bar.
4. Click Install on the Microsoft 365 Agents Toolkit extension.

 **Tip:** After installation, you'll see the Agents Toolkit icon in the VS Code sidebar.

Clone the Agent Repository

1. Open a terminal in VS Code (Terminal → New Terminal).

2. Run: `git clone [repo-url]` (replace `[repo-url]` with the repository URL provided by your team).
3. Open the cloned folder in VS Code (File → Open Folder).

 **Note:** Ask your team lead or admin for the repository URL if you don't have it.

Configure Your SharePoint Knowledge Source

Before deploying, you need to point the agent at the SharePoint site that contains your company policy documents. The agent package includes a placeholder URL that must be replaced.

1. In VS Code, open the file `declarativeAgent.json` from the project root.
2. Find the `"capabilities"` section near the bottom of the file. It looks like this:

```
"capabilities": [  
  {  
    "name": "OneDriveAndSharePoint",  
    "items_by_url": [  
      {  
        "url":  
"https://replaceme.with.your.sharepoint.com/sites/CompanyPolicy/Shared%20Documents"  
      }  
    ]  
  }  
]
```

3. Replace the placeholder URL with your actual SharePoint site URL. For example:

```
"capabilities": [  
  {  
    "name": "OneDriveAndSharePoint",  
    "items_by_url": [  
      {  
        "url":  
"https://yourcompany.sharepoint.com/sites/YourSite/Shared%20Documents"  
      }  
    ]  
  }  
]
```

4. Save the file (Ctrl+S).

 **Tip:** You can use VS Code's built-in Find and Replace (Ctrl+H) to quickly locate `"replaceme.with.your.sharepoint.com"` and swap it with your actual domain.

 **Note:** If your SharePoint URL contains spaces, encode them as `%20` in the JSON. For example: Shared Documents becomes `Shared%20Documents`.

You can also add multiple SharePoint sites by adding more objects to the `items_by_url` array:

```
"items_by_url": [  
  {  
    "url": "https://yourcompany.sharepoint.com/sites/CompanyPolicy/Shared%20Documents"  
  },  
  {  
    "url": "https://yourcompany.sharepoint.com/sites/HRDocs/Shared%20Documents"  
  }  
]
```

Provision and Deploy

1. Click the Agents Toolkit icon in the VS Code sidebar.
2. Sign in to your Microsoft 365 account when prompted.
3. Click "Provision" to set up the cloud resources for your agent.
4. Click "Deploy" to upload the agent to your M365 environment.
5. Wait for the deployment to complete. You'll see a success notification.

☑ The agent is now deployed and connected to your SharePoint policy documents!

Preview and Test

1. In the Agents Toolkit sidebar, click "Preview in Copilot".
2. The agent opens in Microsoft 365 Copilot. You should see My Company Policy ready to chat.
3. Try one of the suggested prompts to verify it's pulling answers from your SharePoint documents.

Troubleshooting

Problem	Fix
Toolkit not showing in sidebar	Restart VS Code after installing the extension
Sign-in fails	Ensure you're using your M365 account (not personal Microsoft account)
Provision fails	Check that your Microsoft 365 Copilot license is active
Deploy fails	Verify Node.js v18+ is installed (node --version in terminal)
Agent not appearing in Copilot	Wait 1–2 minutes after deploy, then refresh
Agent returns no results	Verify the SharePoint URL in declarativeAgent.json is correct and that the site contains your policy documents. Also confirm you have read access to the SharePoint site.

7. Make It Your Own

You can adjust the agent's behavior after setup.

If You Built It in Agent Builder

1. In Copilot, find My Company Policy in your agents list.
2. Click the ... menu → Edit.
3. Make changes on the Configure tab and they save automatically.

If You Imported the Zip

1. Extract the zip file.
2. Open declarativeAgent.json in any text editor (e.g., Notepad).
3. Make your changes, save, and re-zip all files.
4. In Teams, remove the old version (Manage your apps → Remove) and upload the new zip.

 **Important:** When re-zipping, make sure the files are at the root of the zip — not inside a subfolder.

If You Used Option D (VS Code)

1. Open the project folder in VS Code.
2. Edit the declarativeAgent.json or instructions file directly.
3. Re-deploy using the Agents Toolkit ("Deploy" button).

 **Tip:** Changes deployed via the toolkit take effect within 1–2 minutes. Refresh your Copilot chat to see updates.

What You Can Change

Customization	How
Change the agent's tone	Edit the Instructions — adjust wording to match your preferred style
Point to a different SharePoint site	In Agent Builder: remove the existing knowledge source and add a new SharePoint URL. In the JSON: edit the url field under capabilities → items_by_url
Add multiple SharePoint sites	In Agent Builder: add additional SharePoint sites from the Knowledge section. In the JSON: add more objects to the items_by_url array
Hide output sections	Remove sections from the Instructions text
Turn data sources on/off	Add or remove knowledge sources in Agent Builder, or edit the capabilities list in the JSON

Customization	How
Edit starter prompts	Update the Starter Prompts in Agent Builder, or edit conversation_starters in the JSON
Swap the icon	Replace companyinfo.png (192×192) and outline.png (32×32) in the zip with your own PNGs

8. Test That It Works

Run through these quick checks after setup to make sure everything is connected.

Quick Smoke Test

#	Try This Prompt	What to Look For
1	Can you summarize all the types of leave I'm eligible for as a full-time employee?	Types of leave listed with policy document citations (document name, policy number, section)
2	What happens during my first 90 days, and what is the probationary period policy?	Onboarding steps and probationary period details with policy citations
3	What health insurance options are available to employees?	Insurance plan details sourced from policy documents with citations
4	How much notice do I need to give before taking parental leave?	Notice requirements with policy reference; may ask if you're primary/secondary caregiver
5	What are the company's paid holidays this year?	List of holidays with policy citation and disclaimer at the end

 **Note:** If the agent doesn't return data for a query, that's OK — it means the relevant policy document hasn't been added to the SharePoint knowledge source yet. Verify the SharePoint URL is correct and that the documents are stored there.

Full Evaluation

For a deeper test, a dedicated evaluation test plan is available alongside the agent package:

File	What It Is
My Company Policy Agent - Evaluation Test Plan.pdf	Detailed test plan with pass/fail criteria for validating the agent's behavior across grounding accuracy, citation behavior, clarification prompts, tone, and more
