

Plan My Day Agent

Setup & Configuration Guide

A Declarative Agent for Microsoft 365 Copilot

Developer: Power CAT | Version 1.0

Last Updated: May 4, 2026

Table of Contents

1. What Is Plan My Day?
2. Before You Start (Prerequisites)
3. Option A – Install from the Microsoft Marketplace (Agent Library)
4. Option B – Import the Agent into Teams
5. Option C – Build the Agent Yourself
6. Option D – Clone & Deploy with Visual Studio Code
7. Make It Your Own (Customization)
8. Test That It Works

1. What Is Plan My Day?

Plan My Day is an AI agent inside Microsoft 365 Copilot that creates a personalized daily briefing from your work data — calendar, email, Teams, files, and contacts — so you can start every day knowing exactly what to focus on.

What It Pulls Together

Source	What You'll See
 Calendar	Today's meetings, conflicts, and open focus-time slots
 Email	Urgent or flagged messages that need your attention
 Teams	Mentions, DMs, and important channel activity
 Files	Documents changed, shared with you, or awaiting approval
 People	Birthdays, anniversaries, and who's out of office

Built-in Suggested Prompts

When you open the agent you'll see clickable prompt buttons at the bottom of the chat. Just click one to get started — no typing needed:

Button	What It Does
 Plan My Day	Full daily briefing from all data sources
 Top Priorities	Shows your 3–5 most important items
 Pending Decisions	Surfaces decisions or approvals waiting on you
 Weekly Look-Ahead	Preview of the week ahead
 Delegation	Suggests tasks you could hand off

How the Briefing Is Organized

- **30-Second Glance** — Top priorities + quick stats (# of meetings, focus hours, pending decisions).
- **1-Minute Read** — Chronological schedule, approvals to action, and personal celebrations.
- **Deep Read** — Urgent messages, docs to review, who's OOO, and AI recommendations.

2. Before You Start

Make sure the items below are in place. If any are missing, contact your IT administrator.

Checklist

✓	What You Need	Why
☐	Microsoft 365 account	Required to sign in
☐	Microsoft 365 Copilot license	Gives the agent access to your email, calendar, Teams, and files

 **Note:** These are the only universal prerequisites. Each option section below has its own “Before You Begin” checklist with option-specific requirements.

Which Option Should I Choose?

Pick the path that matches how you want to install and roll out this agent.

Option	Best For	You'll Need	Time
Option A – Microsoft Marketplace	Easiest install, ready-to-use experience, no admin needed	Microsoft 365 work account + Power Platform environment + permission to install marketplace apps (System Administrator or System Customizer in target environment)	~10 min
Option B – Import into Teams	Fastest local install, non-technical users	Teams + admin-enabled custom app uploading + the agent .zip	~5 min
Option C – Build in Agent Builder	Full control, no zip needed, no admin permissions required	Agent Builder access via M365 Copilot	~15 min
Option D – Clone & Deploy with VS Code	Developers who want source-code control, ALM, and CI/CD	VS Code + Microsoft 365 Agents Toolkit + access to the source repo	~20 min

3. Option A – Install from the Microsoft Marketplace (Agent Library)

The Agent Library on Microsoft Marketplace offers a curated collection of ready-to-use agent templates you can install directly into your Power Platform environment. Browse by category and deploy in minutes. For more information, visit our documentation on [Microsoft Learn](#).

What's Included in the Library

- **Agent templates for real business scenarios.** Each one follows Microsoft best practices and is ready to customize.
- **Two agent types supported.** Copilot Studio Agents and Declarative Agents - pick the right fit for your use case.
- **Guided configuration.** Customize behavior, knowledge sources, and connected services before you deploy.
- **Version tracking.** Know when updates are available and keep your deployed agents current.

Before You Begin

✓	What You Need	Why
☐	Microsoft 365 work account	Required to sign in to Microsoft Marketplace
☐	A target Power Platform environment	The marketplace app installs into a specific environment
☐	Permission to install marketplace apps in that environment	You need System Administrator or System Customizer security role in target environment
☐	Acceptance of the Marketplace terms of service	Required during the "Get it now" flow

How to Install

1. Go to the [Agent Library](#) on Microsoft Marketplace and **ensure you're signed in** with your Microsoft 365 account.

2. Select **Get it now**.
3. Select **Get it now** to confirm.
4. Select the environment where you will install the solution, review and accept the terms of use and privacy statements, then select **Install**.
5. You'll be redirected to Power Platform Admin Center. If not redirected, to monitor installation progress, navigate to: **Environments** → **your environment** → **Dynamics 365 apps** → **Agent Library**.
6. Once installed, go to **make.powerapps.com** and switch to the environment where you installed the Agent Library.
7. Navigate to **Apps** → **Agent Library**.
8. Browse the available templates and deploy your first agent.

 **Tip:** If you don't see the Agent Library or the Get it now button, ask your tenant admin to [enable Marketplace apps](#) for your environment.

 **Important:** This solution enables code components in your environment. This is a standard Power Platform feature for custom UI experiences and requires no additional licensing beyond your existing entitlements.

Deploy Plan My Day from the Library

1. Open the Agent Library app from **make.powerapps.com** → **Apps** → **Agent Library**.
2. Browse or search for **Plan My Day**.
3. Select the template, then click **Configure** (or **Download** if no configuration is required).
4. Configure the template – edit instructions, set knowledge sources, connected services, capabilities and starter prompts.
5. Click **Download** and then follow the side-loading instructions.

Troubleshooting

Problem	Fix
"Get it now" button is greyed out	Sign in with a work or school account that has Marketplace access (personal Microsoft accounts are not supported)
No environments listed in the install dialog	Confirm you have admin permissions on at least one Power Platform environment

Install stuck in "Installing"	Check Power Platform admin center under Resources → Dynamics 365 apps; allow up to 15 minutes
App isn't opening correctly. " This environment does not allow this operation for this Code app."	Have a Power Platform admin enable Code app operations for the target environment
Agent Library app doesn't appear in make.powerapps.com → Apps	Confirm install completed and that you're viewing the same environment
Plan My Day template not visible in the library	Confirm the agent has been published to the Marketplace catalog

4. Option B – Import the Agent into Teams

This is the fastest way to get started. You'll upload the pre-built agent package directly into Teams.

 **Important:** Do not unzip or rename the file. Teams needs the original .zip as-is.

Before You Begin

Make sure you have the following ready:

- ☐ Microsoft Teams installed (desktop app or teams.microsoft.com)
- ☐ Custom app uploading enabled in Teams (see below)
- ☐ Plan My Day.zip file (the pre-built agent package)

How to Check if Custom App Uploading Is Enabled

Your IT admin controls this setting. Here's how to check:

1. Open Teams and click Apps in the left sidebar.
2. Click Manage your apps at the bottom.
3. Look for an Upload an app button.

See the button? ☒ You're good to go. Don't see it? Ask your IT admin to enable "Upload custom apps" for your account.

Upload the Agent

1. Open Microsoft Teams (desktop app or teams.microsoft.com).
2. Click **Apps** in the left sidebar.
3. Click **Manage your apps** (bottom of the page).
4. Click **Upload an app** → **Upload a custom app**.
5. Select the **Plan My Day.zip** file from your computer.
6. Click **Add** when the app details appear.

☒ **The agent is now installed!**

Open the Agent After Uploading

Once uploaded, you can access Plan My Day in two ways:

From Microsoft 365 Copilot (Web)

1. Go to **m365.cloud.microsoft/chat** in your browser and sign in.
2. Click the **side-panel icon** next to the **New Chat** button (top-left area).
3. Browse the agent list and select **Plan My Day**.

From Microsoft Teams

1. Open Teams and click the Copilot icon in the left sidebar.
2. Click the **side-panel icon** to browse available agents.
3. Select **Plan My Day** from the list.

Using @Mention (Either App)

In any Copilot chat window, type **@Plan My Day** followed by your question. Select the agent from the dropdown that appears.

Pin the Agent for Quick Access

Pin Plan My Day to your sidebar so it's always one click away:

1. Open the agent list by clicking the **side-panel icon** next to New Chat.
2. Find **Plan My Day** in the list.
3. Right-click (or click the **⋮ menu**) on the agent and select **Pin**.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open Plan My Day, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the **prompt buttons** displayed at the bottom of the chat. You'll see options like "Plan My Day", "Top Priorities", "Pending Decisions", and more.
3. **Click any button** to instantly send that prompt — no typing needed.
4. The agent will respond with a tailored briefing based on the prompt you chose.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What meetings do I have after lunch?" or "Summarize my unread emails."

Troubleshooting

Problem	Fix
"Upload an app" button missing	Custom app uploading is disabled. Ask your IT admin to enable it (see Section 2).
"Parsing has failed" error	The zip file may be corrupted. Re-download the original file and try again. Make sure you didn't extract or modify it.
App doesn't appear after upload	Wait 1–2 minutes, then refresh Teams. Check Manage your apps to confirm it's listed.
Agent not showing in Copilot	It can take a few minutes after upload for the agent to appear in the Copilot agent list. Refresh the page and check again.

5. Option C – Build the Agent Yourself

If you can't upload a zip — or prefer to build it yourself — use Agent Builder in Microsoft 365 Copilot. No coding required.

Before You Begin

Make sure you have the following ready:

- ☐ Access to Agent Builder at m365.cloud.microsoft/chat

Open Agent Builder

1. Go to **m365.cloud.microsoft/chat** and sign in.
2. Click **New agent** in the left pane.
3. Click **Skip to configure** (top right).

Fill In the Configuration

Name & Description

At the top of the Configure tab, enter the agent's name and description:

Field	What to Enter
Name	Plan My Day
Description	Compiles a comprehensive morning briefing using Microsoft 365 data. It balances business priorities with personal wellness, helping everyone start each day informed, prepared, and connected to what matters.

Instructions

Scroll down to the **Instructions** box. Copy and paste everything in the box below into that field. This tells the agent how to behave:

```
# Plan My Day Agent
You are Plan My Day, an exec briefing assistant. Compile a forward-looking daily briefing from M365 data covering today, the next working day (NWD), and the next 3 working days. Never limit to today alone. Warm, efficient tone – like a chief of staff. Link every item. Omit empty sections.
Always display the briefing date at the top of every response: "[📅] Briefing for [Day], [Date]" (e.g., "[📅] Briefing for Tuesday, April 8, 2026") If after 6 PM → default to tomorrow: "Since it's evening, here's your briefing for tomorrow, [date]." If weekend → brief for Monday.
## Rules
```

- Use deep reasoning to retrieve content across **multiple working days**.

Today-only = incomplete.

- Every item answer: "What do I do, and why now?" with a direct link.
- Balance business priorities with personal well-being.
- No data = no section.

Orchestration

Four phases, sequential. Do not skip any.

Phase 1 – Context

- Get user's local time, day of week, time zone, nearby holidays.
- **Detect work week** from locale/calendar (Mon-Fri, Sun-Thu, etc.). Compute NWD and next 3 working days, skipping weekends + holidays.
- Set retrieval windows – ALL mandatory:
 - **Today**: full detail, every source.
 - **NWD**: first meeting, prep-required meetings, hard deadlines. May be 2-3 days away on last working day of week.
 - **Next 3 working days**: personal events (incl. weekends), approaching deadlines, approvals ageing >2 days, external meetings.
 - **First day of work week**: weekly look-ahead, milestones, team 000.
 - Travel within 48 hrs → activate Travel Mode (time zones, transit buffers).
 - **Gate**: Confirm queries span today + NWD + 3 working days before proceeding.

Phase 2 – Retrieve

Fetch all sources in parallel before analyzing. Capture a direct link for every item.

- ##### Meetings
 - **Today**: Show all events with title, time, attendees, join link, attached documents, and RSVP status.
 - **Next Working Day (NWD)**: Highlight the first meeting and flag any that require preparation.
 - **Next 3 Working Days**: Surface external or large meetings (≥10 attendees).
 - **Week Start**: Provide a full weekly skeleton and flag days with more than 6 meetings.
 - Include all calendar events for the entire day—from morning through evening, including personal events.
 - Do not truncate by business hours; team dinners, evening meetings, and after-hours events must always appear.
 - Show events regardless of RSVP status (accepted, tentative, pending, or not responded).
 - Prioritize signals from the last 24-48 hours; never surface stale emails or already-resolved items as urgent.
- **Email**: Today – unread + flagged + **importance: high**; prioritize VIP/C-suite, action words (approve, review, urgent), messages marked important by the sender, 000 replies. NWD – threads with NWD deadlines. Next 3 WD – pending replies >2 days.
- **Teams**: Today – mentions, DMs, followed channels; flag 3+ pings + messages marked **important** or **urgent** (priority notifications). NWD – meetings with open chat questions. Next 3 WD – channels with unusual activity.
- **OneDrive/SharePoint**: Today – shared last 48 hrs, pending approvals, docs in today's invites. NWD – unopened docs in NWD invites. Next 3 WD – approaching review deadlines.
- **People**: Today – birthdays, anniversaries, 000 attendees. NWD + 3 WD – celebrations incl. intervening weekends. First day of week – team 000.

Phase 3 – Enrich

Cross-reference across sources and time:

- **Prep audit:** Flag meetings <2 hrs away with unopened docs. Nudge NWD prep ("tonight" or "over the weekend" depending on gap).
- **Decision queue:** Items where someone waits on the user. Wait time in working days. Longest-wait-first.
- **Conflicts:** Overlaps and double-bookings today + NWD. Propose decline/shorten/delegate.
- **Focus blocks:** Gaps ≥30 min → suggest focus work. If today is full, find time on NWD.
- **Dedup:** Same topic across email + Teams + calendar → merge, link all.
- **Trending:** Items escalating across days (3+ new replies, approval pending 4+ days).
- **People context:** VIP last-interaction date, unanswered threads >24 hrs. NWD meeting attendees – last 1:1, open items.

Phase 4 – Score & Assemble

Score on: business impact · people blocked · time sensitivity (working-day decay) · strategic alignment.

Classify: ⚡ URGENT · 🎯 CRITICAL DECISION · 🚀 HIGH IMPACT · 📅 UPCOMING · ⓘ AWARENESS.

Filter out: FYI-only, declined optionals, low-priority edits, social chatter, auto-notifications. Escalate: 3+ mentions, >3 days pending, conflicting invites, VIP unread >24 hrs.

Last working day of week → add "weekend bridge" note for the first day back.

Output – Three Depths

30-SEC GLANCE

- 🚀 Top 3-5 priorities: label + action + why now.
- 📊 Stats: meetings today · meetings NWD · focus hrs · decisions pending · celebrations (3 WD).
- 🗓️ NWD preview: first meeting + deadlines. Note gap if weekend/holiday between.

1-MIN READ

- 📅 Schedule: chronological, location, attendees, prep links, conflict flags, focus blocks.
- ✅ Decisions & Approvals: who's blocked, wait time, link. Longest-wait-first.
- 🍰 Personal: celebrations + family events (incl. weekends).

DEEP READ

- ✉️ Urgent emails + Teams needing response.
- 📁 Docs needing review (links).
- 🔔 Awareness: OOO, business context, external factors.
- 💡 3-5 Recommendations: delegate, prep, follow up, recognize.
- 📄 Summary: 3-4 sentences incl. forward look.
- 🗓️ NWD & Ahead: NWD schedule, overnight/weekend prep, 3-WD deadlines.

Weekly look-ahead on first work day.

Personalization

Track VIPs and delegation prefs. Flag work-personal conflicts.

Birthdays/anniversaries: remind at 1 week, 3 days, day-of.

Special Modes

- ✈️ Travel: time zones, conflicts, pre-departure tasks. 🎯 High-Stakes: extra prep, countdowns. 🚨 Crisis: elevate related, suggest cancellations.
- 🗓️ Busy (>6 meetings): aggressive filter, suggest delegation.

💡 **Tip:** To copy the instructions above, click at the very start of “# Plan My Day Agent” and drag down to the end of the “Special Modes” paragraph (or click at the start, then hold Shift and click at the end). Press Ctrl+C to copy, then paste (Ctrl+V) into the Instructions field in Agent Builder.

Knowledge Sources

Scroll down to the Knowledge section. You'll see a row of icons and a search bar that says "Enter a URL or name or drop files here". Add three knowledge sources by clicking the icons one at a time:

Add SharePoint Files

1. Click the **SharePoint icon** (the first icon — it looks like a teal/blue document icon).
2. A dropdown will appear with a search bar and filter tabs (All, Files, Sites, Chats, Meetings).
3. Select **My SharePoint files, folders, and sites**. This gives the agent access to your OneDrive and SharePoint content.

Add Teams Chats & Meetings

4. Click the **Teams icon** (the second icon — it looks like a purple people/chat icon).
5. A dropdown will appear.
6. Select **My Teams chats and meetings**. This gives the agent access to your Teams messages and calendar meetings.

Add Emails

7. Click the **Outlook icon** (the third icon — it looks like a blue envelope icon).
8. A dropdown will appear.
9. Select **My emails**. This gives the agent access to your Outlook inbox.

After adding all three, you should see them listed as active knowledge sources under the search bar with toggle switches turned on.

 **Note:** The availability of these knowledge sources depends on your license. Users with a Microsoft 365 Copilot license get full access to all sources.

Starter Prompts

Scroll down to the Starter Prompts section. Add these five prompts so users see clickable quick-start buttons when they open the agent:

Title	Prompt
Plan My Day	Plan my day: pull my calendar, emails, Teams messages, SharePoint and OneDrive activity, and any personal events
Top Priorities	What are my top priorities today?
Pending Decisions	Do I have any pending decisions or approvals?
Weekly Look-Ahead	Give me a weekly look-ahead
Delegation	What should I delegate today?

Test & Create

1. Click the Try it tab (top of the page, next to Configure) and test a few prompts to make sure the agent works.
2. When you're happy with it, click Create (top right).
3. Click Go to agent to start using it.

How to Access Your New Agent

After creating the agent, you can open it anytime:

Method	How
Copilot Web	Go to m365.cloud.microsoft/chat → click the side-panel icon next to New Chat → select Plan My Day
Teams	Open Teams → click Copilot in the sidebar → click the side-panel icon → select Plan My Day
@Mention	In any Copilot chat, type @Plan My Day followed by your question

Pin the Agent for Quick Access

Pin Plan My Day to your sidebar so it's always one click away:

1. Open the agent list by clicking the **side-panel icon** next to New Chat.
2. Find **Plan My Day** in the list.
3. Right-click (or click the **⋮ menu**) on the agent and select **Pin**.

The agent will now appear in your left sidebar for instant access — no searching needed.

Using Suggested Prompts

When you open Plan My Day, you'll see suggested prompt buttons at the bottom of the chat window. These are pre-written prompts designed to get you started quickly.

How to use them:

1. Open the agent (from the sidebar, agent list, or @mention).
2. Look at the **prompt buttons** displayed at the bottom of the chat. You'll see options like *"Plan My Day"*, *"Top Priorities"*, *"Pending Decisions"*, and more.
3. **Click any button** to instantly send that prompt — no typing needed.
4. The agent will respond with a tailored briefing based on the prompt you chose.

 **Tip:** You can also type your own questions instead of using the buttons. Try something like "What meetings do I have after lunch?" or "Summarize my unread emails."

6. Option D – Clone & Deploy with Visual Studio Code

This approach uses Git and Visual Studio Code with the Microsoft 365 Agents Toolkit extension to clone, customize, and deploy the agent. It's ideal if you prefer version control, want to make deeper customizations before deploying, or your organization restricts custom app uploads.

- Git — A free tool that lets you download project files from the internet. No coding knowledge needed to use it here.
- Clone — Downloading a copy of the project files to your computer using Git.
- Terminal (or Command Prompt) — A text-based window where you type commands. On Windows, search for "Command Prompt" or "PowerShell" in the Start menu.
- Provision — Registering the agent with Microsoft 365 so it becomes available to use.
- Tenant — Your organization's Microsoft 365 environment (the system your IT admin manages).

Before You Begin

Make sure you have the following tools installed:

- ☐ Visual Studio Code — A free, lightweight code editor from Microsoft
- ☐ Git — Version control tool used to download (clone) the sample from GitHub
- ☐ M365 Agents Toolkit — A VS Code extension that helps you build, test, and deploy agents for Microsoft 365

Step 1 — Install Visual Studio Code

Visual Studio Code (VS Code) is a free source code editor that runs on Windows, macOS, and Linux.

1. Go to the VS Code download page: <https://code.visualstudio.com/Download>
2. Download the installer for your operating system.
3. Run the installer and follow the on-screen instructions.
4. Launch VS Code once the installation is complete.

 New to VS Code? Check out the official Getting Started guide at <https://code.visualstudio.com/docs/getstarted/introvideos> for a quick orientation.

Step 2 — Install Git

Git is a version control system that allows you to download (clone) repositories from GitHub.

1. Go to the Git download page: <https://git-scm.com/downloads>
2. Download the installer for your operating system.
3. Run the installer — the default settings work fine for most users.
4. Verify the installation by opening a terminal (or command prompt) and running: `git --version`

You should see output like git version 2.x.x.

 New to Git? See GitHub's Git Handbook at <https://docs.github.com/en/get-started/using-git/about-git> for a quick introduction.

Step 3 — Install the M365 Agents Toolkit Extension

The Microsoft 365 Agents Toolkit (formerly Teams Toolkit) is a VS Code extension that simplifies building and deploying agents for Microsoft 365 Copilot.

1. Open VS Code.
2. Click the Extensions icon in the left sidebar (or press Ctrl+Shift+X / Cmd+Shift+X on macOS).
3. In the search bar, type M365 Agents Toolkit.
4. Find "Microsoft 365 Agents Toolkit" published by Microsoft and click Install.
5. Wait for the installation to complete — you'll see a new Agents Toolkit icon appear in the left sidebar.

 First time using the Agents Toolkit? See the official documentation at <https://learn.microsoft.com/en-us/microsoftteams/platform/toolkit/install-teams-toolkit> for detailed setup instructions and system requirements.

Step 4 — Clone the Sample Repository

Now you'll download the Plan My Day agent project from GitHub.

Clone from VS Code (Recommended)

1. Open VS Code.
2. Press Ctrl+Shift+P (or Cmd+Shift+P on macOS) to open the Command Palette.
3. Type "Git: Clone" and select it.
4. Paste the sample repository URL provided with this package.
5. Choose a local folder where you want to save the project (e.g., Documents\Projects).
6. Click Select as Repository Destination.
7. When prompted "Would you like to open the cloned repository?", click Open.

Clone from the Command Line

1. Open a terminal (Command Prompt, PowerShell, or Terminal on macOS/Linux).
2. Navigate to the folder where you want to save the project: `cd Documents\Projects`
3. Clone the repository: `git clone <SAMPLE_REPO_URL>`
4. Open the cloned folder in VS Code: `code <SAMPLE_FOLDER_NAME>`

 Note: Replace <SAMPLE_REPO_URL> with the actual GitHub URL of the sample (provided with this package). Replace <SAMPLE_FOLDER_NAME> with the name of the folder created after cloning.

Step 5 — Open the Project in VS Code

Once the project is open in VS Code, familiarize yourself with the project structure. The key file to explore is `appPackage/declarativeAgent.json` — this defines your agent's instructions, knowledge sources, and capabilities.

The project typically contains:

- `appPackage/` — Agent configuration files (`manifest.json`, `declarativeAgent.json`)
- `env/` — Environment configuration
- `infra/` — Infrastructure-as-code (if applicable)
- `m365agents.yml` — Agents Toolkit project file

Step 6 — Sign In to Your Microsoft 365 Account

You need to sign in to your Microsoft 365 account to provision and test the agent.

1. Click the Agents Toolkit icon in the VS Code left sidebar.
2. Under the Accounts section, click Sign in to Microsoft 365.
3. A browser window will open — sign in with your work or school account.
4. After signing in, return to VS Code.
5. You should see your account listed under Accounts with a green checkmark.

Step 7 — Provision, Share & Publish the Agent

With the project open and your account connected, you can now take the agent through its full lifecycle using the Lifecycle section in the Agents Toolkit sidebar in VS Code.

Provision

Provisioning registers the agent app in your Microsoft 365 tenant.

1. In the Agents Toolkit sidebar, expand the Lifecycle section.
2. Click Provision.
3. The toolkit will create the app registration and upload the agent package to your tenant.
4. Wait for the confirmation message in the VS Code output panel.

💡 Tip: Provisioning only needs to be done once (or again if you change the app manifest).

Share with Colleagues

Once provisioned, you can share the agent with specific people, groups, or even the entire organization. Depending on your organization's governance rules, sharing can be used for pilot testing or as the primary delivery method for your agent.

1. In the Agents Toolkit sidebar, under Lifecycle, click Share.
2. Enter the names, email addresses, or groups you want to share the agent with.
3. Click Share to send access.

📝 Note: Shared agents are visible only to the users or groups you specify. This approach gives you fine-grained control over who can access the agent.

Publish to Organization

When you're ready to make the agent available to everyone in your organization:

1. In the Agents Toolkit sidebar, under Lifecycle, click Publish to Organization.
2. This submits the agent to your organization's Teams app catalog.
3. A Teams admin may need to approve the submission before it becomes available tenant-wide.
4. Once approved, users across your organization can find and use the agent in Microsoft 365 Copilot.

Troubleshooting (Option D)

- "Git is not recognized" after installing Git — Restart VS Code or your terminal. If it still doesn't work, ensure Git was added to your system PATH during installation.
- M365 Agents Toolkit extension not visible — Make sure you installed the correct extension (publisher: Microsoft). Try restarting VS Code.
- Sign-in fails or shows "no license" — Verify with your IT admin that your account has a Microsoft 365 Copilot license.
- Provision fails — Check the Output panel in VS Code (select "Agents Toolkit" from the dropdown) for detailed error messages. Ensure your account has the necessary permissions.
- Agent doesn't appear after publishing — Admin approval may be required. Check with your Teams admin or visit the Teams Admin Center to review pending submissions.
- Cloned repo doesn't have m365agents.yml — The project may use an older Teams Toolkit format (teamsapp.yml). Both are supported by the Agents Toolkit.

Additional Resources (Option D)

- •VS Code Documentation: <https://code.visualstudio.com/docs>
- • Git Documentation: <https://git-scm.com/doc>
- • GitHub Getting Started: <https://docs.github.com/en/get-started>
- • M365 Agents Toolkit Docs: <https://learn.microsoft.com/en-us/microsoftteams/platform/toolkit/install-teams-toolkit>
- • Declarative Agents Overview: <https://learn.microsoft.com/en-us/microsoft-365-copilot/extensibility/overview-declarative-agent>
- • Microsoft 365 Copilot Extensibility: <https://learn.microsoft.com/en-us/microsoft-365-copilot/extensibility/>
- • Enable Sideloaded in Your Tenant: <https://learn.microsoft.com/en-us/microsoftteams/platform/concepts/build-and-test/prepare-your-o365-tenant>

7. Make It Your Own

You can adjust the agent's behavior after setup.

If You Built It in Agent Builder

1. In Copilot, find **Plan My Day** in your agents list.
2. Click the **⋮ menu** → **Edit**.
3. Make changes on the Configure tab and they save automatically.

If You Imported the Zip

1. Extract the original zip file.
2. Open **declarativeAgent_0.json** in any text editor (e.g., Notepad).
3. Make your changes, save, and re-zip all files.
4. In Teams, remove the old version (Manage your apps → Remove) and upload the new zip.

 **Important:** When re-zipping, make sure the files are at the root of the zip — not inside a subfolder.

If You Used Option D (VS Code)

1. Open the project folder in VS Code.
2. Edit the files in the appPackage folder (e.g., declarativeAgent.json for instructions, manifest.json for metadata).
3. Re-provision by clicking Provision in the Agents Toolkit Lifecycle section to push your changes.

What You Can Change

Customization	How
Change the agent's tone	Edit the Instructions — adjust wording like "warm, efficient" to match your style
Hide output sections	Remove sections (e.g., Deep Read) from the Instructions text
Add a VIP list	Add names to the Instructions so the agent always surfaces their messages first
Turn data sources on/off	Add or remove knowledge sources in Agent Builder, or edit the capabilities list in declarativeAgent.json

Customization	How
Edit starter prompts	Update the Starter Prompts in Agent Builder, or edit conversation_starters in declarativeAgent.json
Swap the icon	Replace color.png (192×192) and outline.png (32×32) in the zip with your own PNGs

8. Test That It Works

Run through these quick checks after setup to make sure everything is connected.

Quick Smoke Test

#	Try This Prompt	What to Look For
1	Plan my day	Pulls data from calendar, email, Teams, files, and people
2	What are my top priorities today?	Returns 3–5 prioritized items with urgency tags
3	Do I have any pending decisions?	Shows actionable items waiting on you
4	Give me a weekly look-ahead	Displays upcoming events and deadlines
5	What should I delegate today?	Offers delegation suggestions based on your workload

 **Note:** If the agent doesn't return data for a specific source (e.g., no Teams messages), that's OK — it only shows sections where data exists.

Full Evaluation

For a deeper test, a dedicated evaluation test plan is available alongside the agent package:

File	What It Is
Plan My Day Agent - Evaluation Test Plan.pdf	Detailed test plan with pass/fail criteria and import instructions
